

Action Child Protection

Florida Department of Children and Families Case Review February 2016

Review Completed by Action for Child Protection

Northeast Region Overview

Date: 2/11/2016

Overview and Method

Action for Child Protection, Inc. completed a case record review requested by the Florida Department of Children and Families to assess the implementation of the Florida Safety Methodology. Cases were randomly selected from three regions in Florida and the sample was provided to Action for Child Protection. Cases were reviewed off-site by Action staff utilizing Qualtrics survey software and FSN access provided by the Department.

This report provides:

- Summary of key findings for the five main focus points of the review: Present Danger, Information Collection, Impending Danger, Safety Determination and Safety Planning.
- Data profile for cases reviewed within the Northeast Region for CPI.

Sample Size: 26 Cases

Present Danger Assessment

Data Summary

- Total of 6 (24%) cases were identified by the review team case information indicated present danger.
- Total of 7 (28%) cases were identified by the worker indicated present danger.
- This resulted in a difference of 1 (4%) cases between the review teams identification of present danger and the worker identification of present danger. This is a decrease in disparity between the review team and worker since July 2015.

Strengths

- There were several cases where the present danger assessment provided specific detail regarding the CPI assessment to support the assessment and subsequent plans were established to control for the present danger.
- Present danger threats identified were accurate and aligned with the review team findings.

Areas for Consideration

- There were three cases identified by the review team where information within the PDA did not provide detail as to how the determination regarding present danger was made by the worker.

- There were cases that were identified where subsequent contact was made with the family and the potential need for additional present danger assessments was not determined or justification provided, when it appeared that there may have been present danger.

Orange Represents Data from February 2016

Information Collection

Data Summary

- 93% of the cases reviewed were found to have sufficient information collection in at least one of more of the information collection domains.
- 92% of the cases reviewed were found to have sufficient information collection in all six domains.

Strengths

- Information collection for child functioning, maltreatment, and nature of maltreatment was found to be high within the region.
- The majority of cases were found to have sufficient information and were found to have adequate and good quality information.
- Information collection for parenting general and parenting discipline was the highest among the reviews.

Areas for Consideration

- There were cases where the continued exploration regarding all household members was not completed, that may have affected the overall assessment of safety.

Impending Danger Assessment

Data Summary

- Total of 10 (42%) cases were identified by the review team as impending danger.
- Total of 10 (42%) cases were identified by the worker as impending danger.
- This resulted in a difference of 0 (0%) cases between what the review team identified as impending danger and the worker identified as impending danger.
- Total of 2 (8%) cases were identified by the review team as not containing sufficient information to determine impending danger.

Strengths

- Cases where information was determined to be of good quality and sufficient supported the identification of caregiver protective capacities and the danger threats.
- When danger threats were identified, high degree of consistency with review team in the identification of an accurate danger threat.

Areas for Consideration

- In one case there was an emphasis on the child as the caregiver and was utilized to provide the rationale for no impending danger. The focus of the assessment and controlling factors in the home appeared to have been placed on a pre-teen.

Safety Decision

Data Summary

- For all cases reviewed the reviewers found that 86% of the cases that were identified as safe by the worker were accurate. This is an increase of 20% from the July 2015 review.
- In 8% of the total cases reviewed, the review team was not able to identify if the safety decision (either safe or unsafe) was accurate based upon the information in the case record. This is a decrease of 16% since the July 2015 review.
- The review team identified 12 cases where children were determined to be unsafe. The workers identified 14 cases where children were determined to be unsafe.

Strengths

- Several cases where information was sufficient, the safety decision was accurate.
- When children were found to be unsafe by the worker, there was a high degree of consistency with the review team safety determination.

Areas for Consideration

Orange Represents Data from February 2016

Safety Planning

Data Summary

- A total of 8 cases were reviewed for safety plans. In those cases, 100% were identified as having detail and sufficiency to control for danger threats.
- For applicable cases, conditions for return were logical, attainable, and relevant 80% of the time. This is an increased in 18% since the July 2015 review.

Strengths

- For cases where information was available, the safety planning analysis and conditions for return were supported.

Areas for Consideration

- There continues to be a need for exploration of conditions for return, as several cases were noted to have conditions for return that were treatment based.

7. This section is concerned with evaluating the sufficiency of information for the six domains of information collection. Reviewers should be evaluating the information in the FFA in regards to the sufficiency criteria for each domain. Reviewer should select “YES” if information is clearly documented and sufficient for decision making within the Family Functioning Assessment. Reviewer should select “NO, information is present but not sufficient” if the concepts are noted in the Family Functioning Assessment but the information is not sufficient to support decision making. Reviewer should select “NO, information not present” if the worker did not include the concepts in the

Family Functioning Assessment. This decision is based upon the review of the Family Functioning Assessment as recorded in FSFN by the CPI. Case notes are reviewed, however reviewer determination is based solely on FFA completed. Feedback notes should indicate if the case record either negated or supported decision making not otherwise reflected in the FFA.

Question	YES, Information is Sufficient	NO, Information is present but not sufficient	NO, Information is not present	Total Responses
a. Extent of alleged maltreatment (What is the extent of the maltreatment?)	22	2	0	24
b. Nature of maltreatment? (What surrounding circumstances accompany the maltreatment?)	22	2	0	24

f. Child functioning (How does the child function on a daily basis? Include pervasive behaviors, feelings, intellect, physical capacity and temperament.)	22	2	0	24

8. This question is concerned with evaluating the assessment of caregiver protective capacities. Reviewer should select “YES” if information supports the identified caregiver protective capacities. Reviewer should select “NO, information is present but identified Caregiver Protective Capacities are not supported by the information. Worker may have selected caregiver protective capacities that are accurate, however may have selected others that are inaccurate or not supported by the information as being present, but rather absent. Reviewer should select “NO, information not present” to support the assessment of caregiver protective capacities when information is absent from the record to inform the caregiver protective capacities.
